

DRG (Diagnosis Related Groups)

The Diagnosis Related Groups (DRG) were developed for the Health Care Financing Administration as a patient classification scheme which provides a means of relating the type of patients a hospital treats (i.e., its case mix) to the costs incurred by the hospital. While all patients are unique, groups of patients have common demographic, diagnostic and therapeutic attributes that determine their resource needs. The DRGs form a manageable, clinically coherent set of patient classes that relate a hospital's case mix to the resource demands and associated costs experienced by the hospital. Each discharge in the UHDDDB was assigned into a DRG based on the principal diagnosis, secondary diagnoses, surgical procedures, age, sex, and discharge status of the patient.

DRGs are used in the Inpatient Hospital Discharge and the Emergency Department Encounter Query Modules.

Code List

(last updated July 2008)

An * indicates that there has been a change to the definition for that DRG number. The IBIS system uses the most recent definition and lists the codes alphabetically.

| Number | Definition |
